### Bridges Out of Poverty: Strategies for Professionals and Communities

Through this day long training, learn how economic realities of poverty, middle class, and wealth impact individuals, communities, systems and structures. In order to positively impact the education and lives of individuals in poverty, we must explore the way we think and behave. The Bridges out of Poverty workshop offers a structure to help us assess the mindsets and world views we hold as individuals, institutions and communities. It helps us define and visualize the experiences in economic class environments in order to increase our understanding.

Facilitated by Dr. Christina Dinklocker, Summit ESC, Leadership Services
